# Formica® Collection

## Material types

### Formica® Laminate

The original decorative surfacing material.

Available in a wide and attractive range of plain colours, patterns and woodgrain designs, in classic and contemporary stylings, that ensure practical, cost-effective solutions for any environment. Please refer to Colors, Authentix, Patterns, Classics and Woods.

### Formica ColorCore®

A high performance through-colour surfacing material, ColorCore® is a robust laminate that maintains its appearance in high-wear situations. Graphic and layered effects may be fabricated. Machining, routing, engraving – even sandblasting – creates striking impressions.

### Formica DecoMetal®

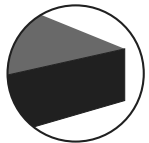

Formica DecoMetal® adds to the convenience of laminate the timeless look of plate metal.

Ideal in vertical applications, this premium range with its genuine metallic surface is equally effective centre stage or as a backdrop. Styles of classic simplicity complement modern industrial effects and echoes of traditional metal crafts.

### Formica Ligna®

This exclusive range combines all the natural qualities of real wood with the practicality of Formica® laminate. Manufactured using reconstituted real wood veneers from sustainable sources, Ligna offers a choice of natural and original colours and effects in a particularly environmentally-friendly way.

### Formica® Compact

Formica® Compact is a homogeneous material with a solid laminated core, ideal for use in applications demanding mechanical strength, damage resistance, hygiene, long life and minimum maintenance.

It has excellent resistance to impact, water, humidity and heat, making it the perfect choice for the most demanding of environments.

Selected decors from Colors, Woods and Patterns are available in Compact grade laminate in thicknesses from 2mm to 20mm.

## Contents

Availability	1-2
Overview by item	3-9
Overview by name	10-16
Grades	17

# Grades

This Collection incorporates the following grades of decorative laminate each with its own performance characteristics. These grades conform to EN 438 and are suitable for the typical applications shown.

Description	Grade	Performance category	Typical applications
Horizontal, general purpose, postforming	HGP	Materials of high performance for general use in horizontal applications requiring particularly high performance. Can be heated and formed under controlled conditions.	Work surfaces; restaurant and hotel tables, doors and wall coverings; heavy duty interior walls of public transport vehicles. Applications where curved details are required.
Horizontal, general purpose, standard	HGS	Similar to HGP.	As for HGP, but where curved details are not required.
Light duty, postforming	LTP*	Materials having special decorative effects. For use in light duty vertical applications.	Furniture front panels; wall coverings etc., where curved details are required.
Compact, general purpose, standard	CBS*(CGS)	Thick materials of high performance for use in applications requiring high impact and moisture resistance.	Cubicles, partitions, laboratory bench tops and various self-supporting components in construction, furniture and transport applications.
Vertical, general purpose, standard	VGS	Materials of less high performance than HGS for general use in vertical applications and for use in some horizontal applications where only moderate performance is required.	Furniture front panels, wall coverings, shelves.
Vertical, general purpose, postforming	VGP	Similar to VGS, but can be heated and formed under controlled conditions.	As for VGS, where curved details are required.
Postformable	PF*	Materials formable under carefully controlled conditions; for use in vertical applications and horizontal applications where only moderate performance is required.	Furniture front panels, wall coverings etc. where curved details are required.

\*LTP, CBS & PF do not appear in the EN 438 classification system.

**Please note: Some designs have particular characteristics that are best viewed in larger samples.**
